Drawing 1 - Assembly

1

1. Find a clear area in which you can work.
2. Unpack fixture and glass from carton.
3. Carefully review instructions prior to assembly.

***** The construction of this fixture will be accomplished by first assembling the main body of the fixture, determining rod length, assembling the rods, attaching mounting assembly, and then hanging the fixture from the ceiling.**

SAFETY WARNING: READ WIRING AND GROUNDING INSTRUCTIONS (I.S. 18) AND ANY ADDITIONAL DIRECTIONS. TURN POWER SUPPLY OFF DURING INSTALLATION. IF NEW WIRING IS REQUIRED, CONSULT A QUALIFIED ELECTRICIAN OR LOCAL AUTHORITIES FOR CODE REQUIREMENTS.

Drawing 2 - Fixture Assembly

2

NOTE: All the parts for the center column assembly are laced on the supply wire. During assembly parts will be slipped along the wire. Caution should be used during this process.

1. to assemble the center column, take the steel center stem (2) and thread it into coupler (A) located on the main body assembly (1), approximately 1/2". Then tighten hex nut (3) against coupler to lock center stem in place - see **Drawing 1**.
2. Slip column (4) along wire and over center stem (2). Make sure bottom edge seats over locator plate (B) on top of main body assembly (1).
3. Slip plate (5) and place on top of column (4).
4. Slip coupler (6) along wire and thread onto top of center stem (2) and tighten to complete center column assembly.

3

1. To prepare the sockets to accept the candle sleeves, it will be necessary to lock them in position. To accomplish this, first tilt bulb socket and bracket (C) up in a vertical position- see **Drawing 2**.
2. Slip the socket and bracket (C) down until the two tabs (D) engage the notch (E) that is in the base socket bracket (F).
3. Tighten screw (G) to lock sockets in position. Repeat for remaining sockets.
4. Slip candle sleeves (7) over sockets (C) and repeat for remaining sockets - see **Drawing 1**.

Drawing 3 - Stem Assembly

4

1. Determine the total stem length required to hang your fixture at the proper height.
2. Determine what stem combination is required to achieve the overall length needed. (Additional stems are available and can be ordered. Ask your local Hinkley Lighting representative or visit www.hinkleylighting.com for information.) - see **Drawing 3**.
3. Install stems by slipping them onto the supply wire of the fixture, threaded end up, and threading them together.
4. Please refer to the hanging instruction sheet (I.S. 19-81) provided to hang fixture. Then refer back to this sheet to install glass.

Drawing 1 - Fixture Assembly

SAFETY WARNING: READ WIRING AND GROUNDING INSTRUCTIONS (I.S. 18) AND ANY ADDITIONAL DIRECTIONS. TURN POWER SUPPLY OFF DURING INSTALLATION. IF NEW WIRING IS REQUIRED, CONSULT A QUALIFIED ELECTRICIAN OR LOCAL AUTHORITIES FOR CODE REQUIREMENTS.

1

1. Shut off electrical current before starting. If the fixture you are replacing is turned on and off by a wall switch, simply turn the switch off. If not, remove the appropriate fuse (or open the circuit breakers) until the fixture is dead.

- DO NOT restore current - either by fuse, breaker or switch - until the new fixture is completely wired and in place.

2

- In the following order: take retainer ring (I) canopy (G) and slide them over the rods (R) attached previously.
- Slip mounting plate with swivel (A) along wires and thread into top of rods (R).
- Attach universal mounting strap (B) to the junction box (J) with screws (C).
- Slip holes (E) in mounting plate with swivel (A) over screws (D) in universal mounting strap (B).
- Thread ball knobs (F) onto screws (D) to secure fixture to universal strap (B).
- All necessary wiring can be done at this time. Please follow I.S. 18 for wiring instructions.
- Slip canopy (G) up along rods (R) and over mounting plate with swivel (A).
- Slip retaining ring (L) up to canopy and thread onto coupler (K), located on the mounting plate and swivel assembly, to secure parts.
- Return to assembly instruction to complete assembly of this fixture.

Drawing 1 - Flush Mount

Drawing 2 - Chain Hung

Drawing 3 - Post-Mount

wiring instructions

Indoor Fixtures

1. Connect positive supply wire **(A)** (typically black or the smooth, unmarked side of the two-conductor cord) to positive fixture lead **(B)** with appropriately sized twist on connector - see **Drawings 1 or 2**.
2. Connect negative supply wire **(C)** (typically white or the ribbed, marked side of the two-conductor cord) to negative fixture lead **(D)**.
3. Please refer to the **grounding instructions** below to complete all electrical connections.

Outdoor Fixtures

1. Connect positive supply wire **(A)** (typically black or the smooth unmarked side of the two-conductor cord) to positive fixture lead **(B)** with appropriately sized twist on connector - see **Drawings 2 or 3**.
2. Connect negative supply wire **(C)** (typically white or the ribbed, marked side of the two-conductor cord) to negative fixture lead **(D)**.
3. Cover open end of connectors with silicone sealant to form a watertight seal.
 - If installing a wall mount fixture, use caulk to seal gaps between the fixture mounting plate (backplate) and the wall. This will help prevent water from entering the outlet box. If the wall surface is lap siding, use caulk and a fixture mounting platform specially.
4. Please refer to the **grounding instructions** below to complete all electrical connections.

grounding instructions

Flush Mount Fixtures

For positive grounding in a 3-wire electrical system, fasten the fixture ground wire **(E)** (typically copper or green plastic coated) to the fixture mounting strap **(1)** with the ground screw **(2)** - see **Drawing 1**.

Note: On straps for screw supported fixtures, first install the two mounting screws in strap. Any remaining tapped hole may be used for the ground screw.

Chain Hung Fixtures

Loop fixture ground wire **(E)** (typically copper or green plastic coated) under the head of the ground screw **(2)** on fixture mounting strap **(1)** and connect to the loose end of the fixture ground wire directly to the ground wire of the building system with appropriately sized twist-on connectors - see **Drawing 2**.

Post-Mount Fixtures

Connect fixture ground wire **(E)** (typically copper or green plastic coated) to power supply ground with appropriately sized twist-on connector inside post. Cover open end of connector with silicone sealant to form a watertight seal - see **Drawing 3**.
